

Requirements Table

Corporate Mental Wellness & Counseling Platform

Scenario 14 | Healthcare & Telemedicine | Actors: Corporate Employee, Licensed Therapist, HR/Admin

NAME: POOJITHA T CLASS: D SRN: PES1UG24AM192

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale
FR-001	Functional	The system shall allow a Corporate Employee to search Licensed Therapists by specialization/availability and book a confidential counseling session (video, audio, or chat) through a self-service scheduler.	High	Pass: Booking is confirmed only for a therapist slot currently marked "Available." Fail: A booking is accepted for a slot already reserved by another employee.	Automates scheduling and removes manual coordination while preventing conflicting double-bookings of a therapist's time.
FR-002	Functional	The system shall verify an employee's active benefits eligibility (remaining session quota, plan tier) before confirming any counseling session booking.	High	Pass: An employee with zero remaining sessions is blocked from free booking and shown a self-pay option. Fail: A session is confirmed for an employee who has exhausted their quota.	Ensures the platform enforces the employer's benefits plan correctly and avoids unbilled or unauthorized sessions.
FR-003	Functional	The system shall let a Licensed Therapist submit encrypted post-session clinical notes tied to a session ID, visible only to that therapist and never exposed to HR/Admin or the employer.	High	Pass: HR/Admin's dashboard shows only aggregated, de-identified usage statistics, never a clinical note. Fail: Any individually identifiable clinical note becomes visible outside the therapist's own view.	Maintains the legal and ethical separation between clinical records and corporate/HR systems required for employee trust and compliance.
FR-004	Functional	The system shall allow a Licensed Therapist to flag an active or completed session as "Crisis / High-Risk," triggering an escalation workflow that notifies a designated on-call crisis contact within 2 minutes.	High	Pass: The flag is time-stamped and the on-call contact is notified within 2 minutes with a case reference (no clinical detail). Fail: A flagged case produces no notification or exceeds the 2-minute SLA.	Employees in acute distress require an immediate human safety-net response that the platform must guarantee, not merely enable.
FR-005	Functional	The system shall let HR/Admin view aggregated, anonymized wellness-engagement dashboards (e.g., total sessions booked, utilization rate by department) without exposing individually identifiable employee data.	Medium	Pass: The dashboard suppresses any department/group view with fewer than 5 employees (k-anonymity threshold). Fail: The dashboard reveals data for a group smaller than the threshold.	Gives the employer actionable utilization insight to justify the wellness benefit while preserving employee confidentiality.
NFR-001	Nonfunctional (Security & Privacy)	All personally identifiable and clinical data must be encrypted at rest and in transit (AES-256 / TLS 1.3), and raw session content must never be written to plaintext logs.	High	Pass: An independent security audit/penetration test confirms full encryption coverage and zero plaintext exposure. Fail: Any log, backup, or export contains plaintext PII or clinical content.	Mental-health data is highly sensitive; a breach carries legal (HIPAA-equivalent) and reputational consequences for both employee and employer.
NFR-002	Nonfunctional (Performance & Availability)	The video/chat counseling platform must maintain 99.9% uptime during business hours and establish a session connection within 5 seconds under peak concurrent load.	High	Pass: Monitoring confirms the uptime target and a P95 connection-setup time $\leq 5s$ under simulated peak load. Fail: Uptime falls below target or connection time exceeds 5 seconds.	A therapy session that fails to connect reliably undermines trust in the platform and can delay care at a critical moment.

Use-Case Diagram

Corporate Mental Wellness & Counseling Platform — Scenario 14

Use-Case Flow Specification

Problem: Scenario 14 — Corporate Mental Wellness & Counseling Platform

Use Case: Book Counseling Session

Primary Actor: Corporate Employee

Secondary Actor: Licensed Therapist

Includes: Verify Employee Eligibility, Verify Therapist Availability

Extended by: Escalate Crisis Case (extends Submit Session Notes, invoked once the session is underway)

Preconditions

- The Corporate Employee is authenticated and linked to an active corporate wellness benefits account.
- At least one Licensed Therapist has a valid profile with a published, real-time availability calendar.
- The employee's benefits eligibility record (session quota, plan tier) is present in the system.

Main Success Scenario

1. The Corporate Employee logs in and selects "Book Counseling Session" from the platform.
2. The system includes Verify Employee Eligibility to confirm the employee has a remaining session quota under the active plan.
3. The system includes Verify Therapist Availability, presenting Licensed Therapists whose specialization and calendar match the employee's request.
4. The Corporate Employee selects a therapist, time slot, and session format (video, audio, or chat).
5. The system reserves the slot, confirms the booking to the employee, and notifies the Licensed Therapist.
6. At the scheduled time, the Corporate Employee and Licensed Therapist conduct the counseling session on the platform.
7. Following the session, the Licensed Therapist submits encrypted session notes visible only to themselves.
8. The system updates the employee's remaining session quota and marks the booking as "Completed."
9. The use case ends successfully.

Alternate Flow

2a. Employee Not Eligible

- 2a1. The system detects the employee has zero remaining sessions under the active plan.
- 2a2. The system informs the employee of the shortfall and offers a self-pay session option.
- 2a3. If the employee declines self-pay, the booking attempt ends without reserving a slot.

7a. Therapist Flags a Crisis / High-Risk Case

- 7a1. While submitting session notes, the Licensed Therapist marks the session as Crisis / High-Risk.
- 7a2. The system triggers Escalate Crisis Case, notifying the designated on-call crisis contact within 2 minutes with a case reference (no clinical detail).
- 7a3. The booking is marked "Escalated" instead of "Completed," and flow resumes at step 8.

Postconditions

- A confirmed session booking exists with the correct employee, therapist, time slot, and format.
- The employee's session quota accurately reflects the completed or escalated booking.
- Session notes, when submitted, are visible only to the authoring Licensed Therapist.
- Any session flagged Crisis / High-Risk has generated a timely, logged escalation notification.
